

345kV line 367:

Eversource states: “The proposed project is necessary in order to support current and future electricity demands in the region. The proposed structure replacements were selected based on field inspection and identification of damaged and/or aging structures. The existing wood structures will be replaced with wood equivalent steel structures in order to increase the long-term reliability of the line.”

https://www.newipswichnh.gov/sites/g/files/vyhlf4766/f/agendas/eversource_zba_application.pdf

Eversource misleadingly implies that this Asset Condition project is a reliability project, necessary to meet the reasonable needs of service to the public, and has been approved as such by an agency such as the PUC, DOE or ISO.
