Thank you, attached is the Datacheck from DES's project submittal. They received a no hits letter, which is autogenerated from the Datacheck Tool if there are no known occurrences in the vicinity of the project. NHB staff did not review this proposed project.

Thanks,
Sabrina

Sabrina:

Please see the message from Rene Pelletier of DES regarding the proposed dam reconstruction on Nash Stream Forest. I assume that DES submitted a datacheck request given his comment about "worl begonia" which occurs "anywhere in NH north of the notches."

Thanks,

Patrick

Subject: Nash Stream Project

[REDACTED] Below is the status of the Nash Stream project.

The Nash Stream project which includes 2 dams (Little Bog and Lower Trio) came at the request of Governor Sununu. We are using ARPA funds for the project and using GEI as our consultant/design engineer. Currently, the plan is

to put this project out to bid in the late summer/early fall of 2024 and for construction to take place in 2025 and possibly 2026. The project will include reconstruction of both dams as well as upgrading the road between the two dams so that it is accessible for concrete trucks. Wetland Permits will be submitted this spring/summer and there weren't any notable endangered species. We got hits for the Canadien Lynx and the Worl Begonia but you will get hits for those anywhere in NH north of the notches.

We don't know of drawdown plans yet as the design effort is only at a conceptual level. We will know more this winter when we get to the 60% design. GEI and their surveyor (BSC Group) have already surveyed both dams and the road and have mapped out wetlands, stream crossings, etc. Let me know if you would like to discuss further. Give me a call at 271-0677

Kind Regards,

Rene
