Ridge:

Following up my call, I forward an emailed map Kris Pastoriza sent me of her property in Easton. She has substantial concerns about the very large Eversource X-178 rebuild project and its impact on her property.

Please update me on the status of the Alteration of Terrain process. I want to visit NHDES and look at any and all filings asap.

Thank you,

Art

Subject: aquifer and wetlands

This property is outlined in blue. Where there is no blue line the rivers are the boundary pink/purple is wetlands, not shown on WMNF because they hide their data.

Aquifer transmissivity is shown in tan to brown, darker means higher transmissivity.

The line is just visible left of the middle running south, angling southeast on this property and continuing on that line into WMNF.

I'm still working on how to present the shifting rationales for Eversource's transmission asset condition projects.

This seems relevant because ISO accepted these undocumented claims without question, pretty much until the X-178.

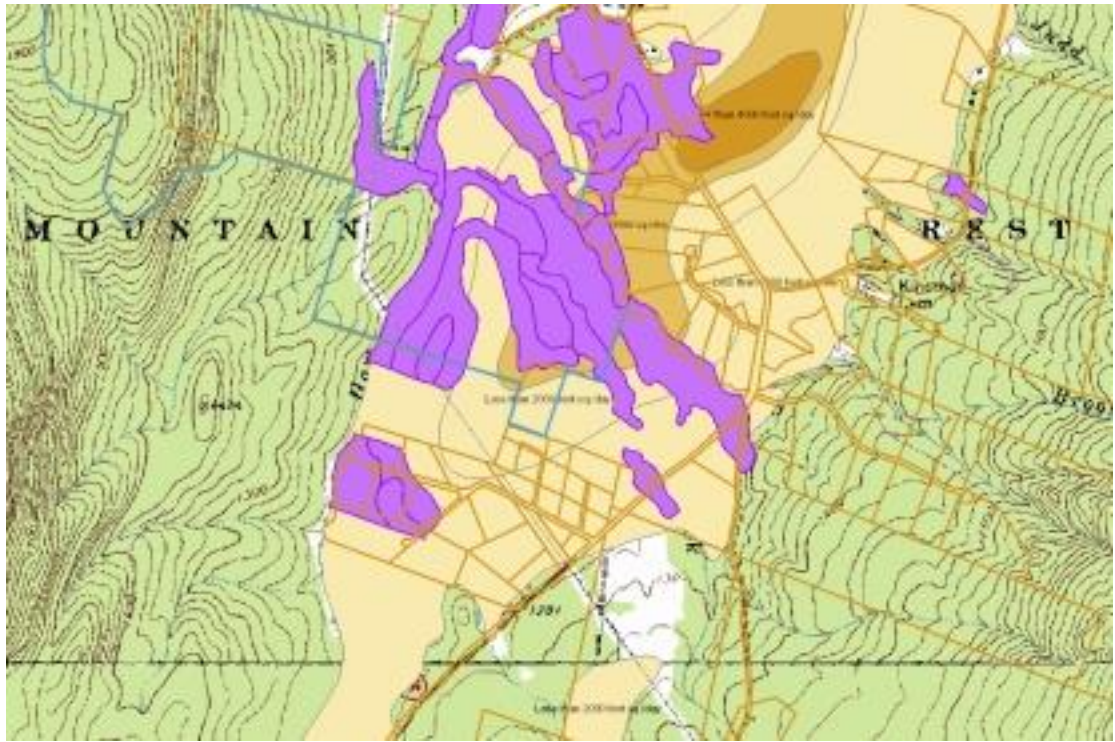

Below, DES One-Stop site, where one can sometimes see that there is an AoT (not sure if permits and applications are posted here) but from which I have never been able to download one. This message appears frequently.
